Prompt: How have you heard the term Intersectionality used in the past? How is it different from what was described in this week's readings and/or powerpoint?

When I heard the term "intersectionality" before this course, I knew that it related to identity and thought that it was context for how people of different backgrounds interpret things and interact with each other. In the past, I think my definition of intersectionality was mixed between intersectionality and positionality.

In learning that intersectionality is the tool we used to interpret and decipher more about identity and political correctness to approach these traits, I think I better understand a lot more about CRT.
